

AGRI_EMPOWER DIGITAL ACADEMY POULTRY INTERMEDIATE LEVEL MANUAL

Program Goal

Improve efficiency, reduce losses, and stabilize cash flow while transitioning poultry farming into a predictable and profitable enterprise.

Module 1: Production, Operations & Farm Management

Growth Monitoring: Use weighing scale weekly to track performance against breed standards.

Weekly Weighing: Sample 5–10% of flock to detect early growth issues.

FCR: $\text{Total Feed} \div \text{Weight Gain}$. Target 1.5–1.7 for broilers.

Stocking Density: Avoid overcrowding to prevent stress and disease.

Ventilation: Maintain air quality to reduce ammonia.

Heat Stress Control: Provide cool water and avoid feeding during peak heat.

Batch Planning: Plan next production cycle before current ends.

Module 2: Health, Disease & Biosecurity

Water Sanitation: Use disinfectants to maintain clean water.

Mortality Tracking: Monitor patterns, not just numbers.

Deworming: Essential for layers and free-range systems.

Antibiotic Use: Only for bacterial infections with withdrawal compliance.

Outbreak Response: Isolate, call vet, restrict movement, disinfect.

Module 3: Post-Harvest & Cold Chain

Egg Grading: Sort eggs by size and quality.

Cold Chain: Maintain below 4°C after slaughter.

Packaging: Use crates and food-grade bags.

Transport Timing: Move birds during cooler hours.

Module 4: Processing & Value Addition

Portioning: Cut birds into parts for higher value.

Branding: Label products with weight and date.

Waste Utilization: Convert feathers and waste into fertilizer or feed.

Module 5: Agribusiness & Finance

Break-even Analysis: Know minimum selling price.

Cash Flow Planning: Ensure funds for next cycle.

Direct Marketing: Sell to homes and restaurants.

Market Segmentation: Tailor products to different buyers.

Competency Assessment

Students must submit growth reports, FCR calculations, and financial plans for one production cycle.
