

Agri_Empower Training Series

Yam Mastery: Specialisation Level (Expert Residency)

At this final level, participants choose a dedicated career path to become industry-leading consultants, innovators, or large-scale entrepreneurs.

TRACK A

The Seed Specialist (Nursery & Multiplication)

Solving the global shortage of high-quality, disease-free planting materials.

- **Minisett Technology Pro:** Precision cutting (25g–30g) and advanced chemical treatment for 95%+ germination rates.
- **G0 Generation Production:** Utilizing Aeroponics and Hydroponics to grow seed yams in soil-less environments, ensuring 100% virus-free stock.
- **Seed Certification Logistics:** Navigating national seed council regulations and establishing a commercial Seed Bank.

TRACK B

The Plant Health Doctor (Pathology & Soil)

Expertise in forensic agronomy and organic crop protection systems.

- **Microbiome Engineering:** Enhancing tuber size using beneficial fungi (Mycorrhizae) to reduce reliance on chemical NPK.
- **Diagnostic Field Kits:** Rapid identification of fungal vs. viral wilts using mobile lab equipment.

- **Bio-Pesticide Formulation:** Commercial-scale extraction of botanical insecticides from Neem, Garlic, and Ginger.

TRACK C

The Value-Chain Engineer (Processing & Export)

Mastering industrial food standards and international commodity trade.

- **HACCP & ISO Design:** Planning processing plants that meet global Hazard Analysis and Critical Control Point standards.
- **Product Innovation:** Bio-fortification techniques to add essential vitamins to yam flour products.
- **Export Brokerage:** Mastering Incoterms, international shipping logistics, and Nigerian Export Promotion Council (NEPC) protocols.

TRACK D

The Smart-Farm Architect (Ag-Tech & Automation)

Integrating 4th Industrial Revolution technologies into tropical agriculture.

- **Multispectral Drone Imagery:** Using drones to identify nutrient deficiencies and water stress zones before visible wilting occurs.
- **IoT Infrastructure:** Deploying wireless sensor networks for automated, data-driven irrigation management.
- **Farm Management ERP:** Implementing digital dashboards for real-time tracking of labor, machinery, and ROI.

The Specialisation Grand Project (Final Exam)

Candidates must successfully complete a "Real-World Deployment" to graduate:

- **Option 1:** Produce and market 10,000 certified seed yams using minisett technology.
- **Option 2:** Design a functional, export-compliant processing line for yam-based products.
- **Option 3:** Install and manage a sensor-based irrigation system on a 5-hectare commercial plot.
