

AGRI_EMPOWER LEARNING PROGRAM

POULTRY PRODUCTION – FOUNDATION LEVEL

Module 1: Introduction to Poultry Farming

Poultry farming involves raising birds such as chickens for meat or eggs. It is a profitable agribusiness with high demand and quick turnover.

Module 2: Types of Poultry Production

Broilers: Raised for meat.

Layers: Raised for egg production.

Noilers: Dual-purpose birds.

Module 3: Housing and Equipment

Proper housing ensures good ventilation, protection from predators, and adequate space. Recommended stocking density for broilers is 0.12 m² per bird.

Module 4: Feeding and Nutrition

Birds require starter, grower, and finisher feeds. Feed quality directly affects growth and profitability.

Module 5: Vaccination Schedule

Day 1: Marek's Disease (Injection)

Day 7: Newcastle (Eye drop)

Day 14: Gumboro

Day 21: Booster doses as required.

Module 6: Biosecurity

Restrict access, use footbaths, clean regularly, control pests, and isolate sick birds.

Module 7: Growth and Management

Monitor weight, feed intake, and health daily. Maintain records.

Module 8: Marketing

Sell to markets, hotels, and individuals. Plan sales ahead to avoid losses.

Assessment Questions

1. List types of poultry production.
2. Explain stocking density.
3. List biosecurity measures.
4. Outline vaccination schedule.
5. Explain importance of feed.
